

MAZDA CX-5 AutoExe Pricelist

SUSPENSION

Part# MZKF7850P00

Street Sports Suspension Kit

₱166,689.60

Sharper response. Refined control.

AutoExe's ultimate street performance suspension. The twin-tube dampers generate damping force from very low speeds while precisely controlling body roll through Dynamic Kansei Engineering. The result is linear, responsive handling with enhanced driving confidence—without compromising ride comfort. Vehicle height can be lowered by up to 25 mm.

**Two genuine mounting rubbers (TK52-28-380C) are required separately*

Part# MZKFA1V5710

Active Cross Suspension Kit

₱152,866.56

Elevated capability. Confident performance.

Designed for drivers who seek confident, engaging performance both on-road and off-road. High-precision twin-tube dampers are paired with specially developed springs that raise the vehicle height by 25 mm, increasing ground clearance and enhancing off-road capability.

The rear dampers feature adjustable damping force to accommodate varying vehicle loads, while the adjustable stabilizer links help maintain optimal suspension geometry with the increased ride height. Based on AutoExe's philosophy of sporty performance without compromising comfort, the system is tuned to deliver improved off-road capability, stability, and load-carrying performance.

**Two genuine mounting rubbers (TK52-28-380C) are required separately*

INTERIOR

Part# MZKFA1V0310

Sports Steering Wheel

Sportier feel. Greater control.

₱36,590.40

A red center mark and flat-bottom design add a distinctly sporty touch to the steering wheel. Airbag-compatible and finished in premium Nappa leather, it combines refined craftsmanship with enhanced grip and control. The slim elliptical grip, dimpled leather surface, and thumb grips provide a secure and comfortable hold, delivering a more engaging driving experience.

Part# MZND1V54A0P00

Door Stabilizer

Sharper Handling. Greater Stability

₱17,888.64

This body reinforcement part fills the gap between the door and the body, utilizing the closed door as a reinforcing bar. It reduces initial steering response delay and corrective steering, and also speeds up the damping of swaying when going over bumps. It can be installed without any modifications to the vehicle.

**Two sets are needed for compatible four-door SUV models (front and rear)*
