

MAZDA CX-60 AutoExe Pricelist

EXTERIOR

Part# MZ1V4220P00

Front Grille

₱59,519

Emphasizing the CX-60's attention to form and proportion, the AutoExe Front Grille features gloss black horizontal slats that give depth. The Mazda emblem and i-ACTIVSENSE® hardware are carried over.

Part# MZ1V3300P00

Rear Bumper Under Garnish

₱49,682

Enhancing its overall style, the Rear Bumper Under Garnish attaches directly to the rear bumper. The special mesh insert and diffuser pattern adds a sporty touch.

Part# MZ1V9770P00

Wheel Nut Set

₱9,908

Add a subtle, yet sophisticated feel to your Mazda's wheels with these small diameter wheel nuts. The heptagonal design uses a special adapter wrench that prevents wheel theft. Made of high-strength chrome vanadium steel that does not loosen even at high temperatures, it is finished in black with a knurled red aluminum end cap.

EXTERIOR

Part# MZKHV4900P00

Front Under Spoiler

₱66,675.84

The dynamic form, incorporating a high nose and forward-swept wing tips, gives the car a powerful and elegant look. Painted in piano black.

Part# MZKHA1V4950

Rear Side Spoiler Garnish

₱24,393.60

A set of left and right matte carbon-look wheels with a fin design that resembles the flow of wind. Comes with double-sided tape.

Part# MZKHA1V4920

Rear Roof Spoiler

₱71,554.56

Glossy piano black specifications. The wing-type design full of sports mind gives the rear view a powerful impression.

INTERIOR

Part# MZND1V54A0P00

Door Stabilizer

₱17,888.64

This body reinforcement part fills the gap between the door and the body, utilizing the closed door as a reinforcing bar. It reduces initial steering response delay and corrective steering, and also speeds up the damping of swaying when going over bumps. It can be installed without any modifications to the vehicle.

**Two sets are needed for compatible four-door SUV models (front and rear)*

SUSPENSION

Part# MZ1V5700AP00

Street Sports Suspension Kit

₱153,625

Based on AutoExe's dynamic sensitivity engineering that emphasizes driver feel, the Street Sports Suspension Kit improves riding comfort while also increasing linear response. The kit includes a twin-tube fixed damper system and dedicated spring allowing for a constant damping ratio during both extension or compression. Ride height can be adjusted lower or higher by 10mm.

Part# MZ1V5720P00

Low Down Spring

₱43,692

Providing both a heightened sense of style and handling, the Low Down Spring lowers the vehicle height by 25mm. As a result, it improves overall handling and responsiveness. Working hand-in-hand with the bump stop, the spring rate has been meticulously calculated—not too low, not too high—to provide more natural handling.

Part# MZ1V5740P00

Front Sports Stabilizer

₱45,806

Constructed from hollow aluminum, the Front Sports Stabilizer bar measures 35mm in diameter, increasing the front spring constant by 121%. This stabilizes the vehicle posture when cornering while keeping controllability. Comes with dedicated rubber mounting.

SUSPENSION

Part# MZ1V5750P00

Rear Sports Stabilizer

₱28,188

Made of a solid aluminum piece measuring 24mm in diameter, it increases the rear spring constant by 128%.

Part# MZ1V5760P00

Front Stabilizer Link

₱10,571

Connecting the stabilizer and the damper, the Front Adjustable Stabilizer Link is indispensable for vehicles with a lowered ride height. It optimizes the suspension geometry by returning the angle of the lower arm to the appropriate level, thereby sharpening the responsiveness.

Part# MZ2V5760P00

Rear Adjustable Stabilizer Link

₱17,618

When the vehicle's ride height is changed, the angle of the lower arm changes. As a result, the arm angle between the stabilizer and damper is not optimal. The Rear Adjustable Stabilizer Link returns the angle of the lower arm to the appropriate level, increasing the sharpness of its responses.

Part# MZ1V5420P00

Front Strut Tower Bar

₱26,779

With limited space and structure, the Front Strut Tower Bar is composed of five main pieces, mounted in four places. The main bar is mounted on the front frame, while the suspension towers are connected three-dimensionally with a gusset plate. Despite its split structure, it still ensures rigidity comparable to one-piece welded designs.

Part# MZ1V5440P00

Center Floor Bar

₱25,369

This welded one-piece structure connects the left and right sides of the interior to suppress distortion near the center of the monocoque frame which cannot otherwise be compensated for by the Front Strut Tower Bar or Rear Floor Cross Bar. Mounted with four bolts on the rear side of the front seat, it keeps intrusion in the rear leg space to a minimum.

Part# MZ1V5450P00

Rear Floor Cross Bar

₱25,369

The rear equivalent of the Front Strut Tower Bar, it connects the left and right sides of the suspension tower of the rear floor. It increases the overall stiffness of the body shell with almost no impact to the cargo space.

Part# MZ1V5460P00

Front Lower Arm Bar

₱14,094

Made of high-strength steel, the Front Lower Arm Bar supports accurate handling by suppressing the deformation of the lower side of the suspension by connecting to the center of the front lower arm pivot. This sharpens the responsiveness by eliminating any alignment changes to the suspension during hard cornering. Ground clearance decreases 15mm upon installation.

Part# MZ1V5470P00

Rear Lower Arm Bar

₱14,094

Connecting the left and right sides via the pivot point of the rear control link, it creates a closed structure. This helps suppress suspension deformation by counteracting forces exerted on the suspension components. Gussets Reinforcement plates are placed on the mounting surface to equalize the pressure applied to the joint surface, ensuring the highest level of rigidity.

Part# MZ1V5410P00

Member Brace Set

₱76,108

An advancement of the Rear Floor Cross Bar, the Member Brace Set also connects the left and right sides of the car, but over a wider area. This suppresses the twisting or distortion of the body, eliminating any change in chassis geometry, especially under load. A tough gusset is placed on the mounting area where load is the highest to distribute surface pressure. Ground clearance decreases 15mm upon installation. Weighs 9.5 kilograms.

INTAKE & EXHAUST

Part# MZ1V5900P00

Ram Air Intake System

₱85,974

Improves the power and torque by pushing more air to improve the air/fuel mix ratio. The Ram Air Intake System is composed of a semi-open type carbon air intake box, specially-designed intake duct, and low-resistance K&N wet- type air filter. It comes with an adapter to install the airflow sensor.

Part# MZ1V5940P00

Diesel Intake Suction Kit

₱17,054

Made of multi-layer silicon and fiber-reinforced plastic (FRP), the Intake Suction Kit eliminates the flexible joint meaning air flows smoother through the intake and into the engine. The construction itself withstands deformation even at high engine loads. As an added bonus, the Crimson color and an AutoExe logo adds an eye-catching accent to the engine bay.

Part# MZ2V5800P00

Gasoline Sports Muffler

₱129,835

Eye-catching with an exciting sound to match. The Sports Muffler features four 80mm outlets with a 60.5mm pipe diameter. By changing to a straight structure, it reduces back pressure loss improving responsiveness and exhaust efficiency. And with no sound absorption material present, the sound produced is cleaner.

**Must be installed with Sports Muffler Garnish*

Part# MZ1V5800P00

Diesel Sports Muffler

₱98,870

With emphasis on improving exhaust efficiency, the Diesel Sports Muffler switches from a multi-stage expansion type to a straight structure for reduced back pressure. By carefully examining the pipe layout and silencer capacity, the result is a well-defined, sportier sound. Pipe diameter is 60.5mm, while tailpipe diameter is 80mm x 4.

**Must be installed with Sports Muffler Garnish*

Part# MZ1V3910P00

Sports Muffler Garnish

₱19,732

Made by AES, this satin black garnish allows for the installation of the Sports Muffler.

**Must be installed with Gasoline Sports Muffler or Diesel Sports Muffler*
